Urinary incontinence is the uncontrolled leakage of urine from the bladder. The amount of urine leakage varies from child to child, as does the time of day when it occurs. This information sheet from Great Ormond Street Hospital (GOSH) explains the causes, symptoms and treatment options for urinary incontinence - also referred to as enuresis if it occurs at night-time - and where to get help.

Urinary incontinence | Great Ormond Street Hospital

Play therapy is very effective for children aged 3 to 12. The child chooses from a range of activities in the play room. These include: drawing and painting, sand tray, clay, puppets, musical instruments, story-telling, role play. The Play Therapist focuses closely on the child, communicating using the media the child has chosen.
