Dryland-Agriculture-ACSESS

Dryland agriculture is of more consequence now than ever because the world's dependence on food produced in dryland areas is even greater. In recognition of this, and the fact that global food supply is increasingly interconnected, this volume takes a world view of dryland production continent by continent.

Robert Kolberg-USDA-ARS

Dryland farming is frequently defined as crop production in areas with less than 500 mm of annual precipitation, but this definition omits a critical component of the equation, evaporation potential. Operatively, dryland farming is practiced where annual potential water evaporation exceeds annual precipitation. The example for the Central Great Plains of the United States in Fig. 1 illustrates ...

Dryland-Farming-an-overview-ScienceDirect-Topics

Dryland farming and dry farming encompass specific agricultural techniques for the non-irrigated cultivation of crops.Dryland farming is associated with drylands, areas characterized by a cool wet season (which charges the soil with virtually all the moisture that the crops will receive prior to harvest) followed by a warm dry season. They are also associated with arid conditions, areas prone ...

Dryland-farming-Wikipedia

Various elements of dryland agriculture are described, highlighting associated breeding and modelling efforts, analysing the experiences and challenges of dryland agriculture in different regions, and it proposes some practical innovations and new areas of research in this critical area of agriculture.

Innovations-in-Dryland-Agriculture-1st-ed-2016-Edition

Dryland agriculture refers to cultivation of crops entirely under natural rainfall without irrigation. It is a form of subsistence farming in the regions where deficit of the soil moisture retards the growth of water consuming crops like rice (Oryza sativa), sugarcane etc. Dryland areas are characterized by low and erratic rainfall and no assured irrigation facilities.

Knew-about-Dryland-Agriculture-and-Farming-Technology

Some crops are, however, completely impossible to grow by dryland agriculture, such as the food crops of rice (requiring 3,000 to 5,000 liters of water per kilogram of crop produced) and sugar-cane (1,500 to 3,000 liters of water per kilogram), and certain varieties of commercially cropped cotton (7,000-29,000 liters of water per kilogram).
