Endocrine ; 3 An insect uses its digestive system to extract nutrients and other substances from the food it consumes. Most of this food is ingested in the form of macromolecules and other complex substances (such as proteins, polysaccharides, fats, nucleic acids, etc.) which must be broken down by catabolic reactions into smaller molecules (i.e. amino acids, simple sugars, etc.) before being ...

Insect hormones 1. Steroid hormones 2. Peptide hormones 3. History of insect hormones 3 What is HORMONE ? Greek word means ' I EXCITE ' . • It is defined as Chemicals produced in a gland that are released into the blood and have their effect ...

### [1. Physiology and Biochemistry of Insect Hormones](#)

CHEMICALS BASED ON ENDOCRINE and nervous system In insects, virtually all life processes are regulated by neural and endocrine systems. Basically Three types of hormones a) Brain hormones b) Moulting hormones c) Juvenile hormones These hormones are involved in the life processes of insects and regulating insect development, so studying of these can be utilized for insect pest control.

THORAX The insect thorax is divided into three parts: prothorax, mesothorax, and metathorax Each segment consists of hardened plates, or sclerites. Dorsal sclerites are called nota (sing. notum), lateral sclerites are called pleura (sing. pleuron), and ventral sclerites are called sterna (sing. sternum). 17.

Endocrine glands-Neurosecretory cells (NSC), Prothoracic glands, Corpora allata, Corpora cardiaca & Weismann's ring. Exocrine Glands-Setal glands, Stink gland...

## [Lecture 15: Endocrine & Exocrine glands in insects](#)

In insects, neurosecretory cells are numerous and have important functions. Recent work has revealed that there are two types of neurosecretory cells: type A which stain with para-aldehyde fuchsin, and type B which do not. All cells possess electron dense granules.

## [Endocrine Glands in Insects - Zoology Notes](#)

Once an insect reaches the adult stage, its prothoracic glands atrophy (wither away) and it will never molt again. Prothoracic glands produce and release ecdysteroids only after they have been stimulated by another chemical messenger, prothoracicotrophic hormone (PTTH for short).

Several reviews of ILP endocrinology provide an extensive collation of earlier studies and their significance for insects and other invertebrates (Smit et al., 1998, Claeys et al., 2002, Wu and Brown, 2006, Gronke et al., 2010).

## [Insulin-Like Peptides: Structure, Signaling, and Function ...](#)

Endocrine glands controlled by central NSCs are the sinus gland (sgl), postcommissural organ (pcoo), and pericardial organ (peo), the latter possibly homologous to the insect corpora cardiaca. The Y-gland (Y) produces ecdysone and represents a homolog of the insect prothoracic gland; likewise, the mandibular organ (mo) secretes methyl farnesoate which is chemically and functionally similar to ...

## [The neuroendocrine system of invertebrates: a ...](#)

Insect Endocrinology covers the mechanism of action of insect hormones during growth and metamorphosis as well as the role of insect hormones in reproduction, diapause and the regulation of metabolism.
