Book One: Young Nate is on a foreign exchange assignment to stay with a family in an ancient castle in western Germany. As he eagerly learns to adapt to the culture, Nate is befriended by neighboring Germans, Thorston and Sandra, who together discover there is something terribly wrong in the castle and the surrounding farming village of Gauenrheim. Book Two: Nate Brighton returns home to America and soon departs with his Christian education/missionary family for the island of Okinawa, Japan. Once settled into this foreign but astonishingly eventful place, Nate and his younger brother and friends set off for a camping trip at the ruins of Nagasaki Castle. Book Three: It is one thing to talk about protecting the environment, but it's an entirely different thing to stand up and do something about it. The Connor boys, as you will see, are up for such a task. Nate and Ricky's parents send them home to Washington State from Okinawa, Japan, to stay in their home under the guardianship of their Uncle Hank and prepare for a new school year.

The year is 2056. The world is still recovering from the pandemic of 2027 caused by a meteor borne virus that wiped out half the population. Cloning has been legalized in a desperate attempt to save humanity. Dodge Kerrington, a renowned Electronics Engineer leads his team at Embedded Systems Specialist. They must design and perfect memory transfer for the Human Cloning Process. ESS prevails by creating the first successful system that records IHE (individual human experience) as a LifeFile that uploads into the brain of a newly grown clone. ESS launches the system and human immortality is born. Disease Treatment Centers are bankrupt. Hospitals and Clinics convert to LifeCenters, all in the business of providing Restoration services. Funerals are nearly unheard of, only hardcore religious hold outs choose natural death over Restoration. Enter the world of High Tech Industrial Espionage with Dodge Kerrington and his best friend and security expert John Calhoun as they fight for their very lives against criminal master mind Cyrus Slade and his partner, a world renowned hacker known only as 'Glitch' who desperately desire to obtain the new technology and the incredible power that comes with it. It's an all out battle for control of Restoration and the minds of those that created it. In a high tech game of murder, hacking, and unbridled greed, the future of humanity hangs in the balance. Show more Show less

Matt McKenzie is a covert agent in America's most secret counterterrorism agency; an agency so highly classified that only the president knows of its existence. While investigating the disappearance of his sister, who vanished while working for FutureTech, a powerful defense contractor, he makes a chilling discovery: a plot to use a futuristic weapon to assassinate the president and overthrow the American government. Matt suddenly finds himself in the most desperate fight of his life as he struggles to stop a ruthless CEO and a self-righteous politician from bringing the country to its knees and throwing the world into chaos.

Car Launch: The Human Side of Managing Change is the first book in the new Oxford series, The Learning History Library. It is edited by Art Kleiner and George Roth, both of whom originated the concept of the learning history. These extended "Living" case studies use an innovative format based on "the jointly told tale" to help narrate the story of major intra-firm transitions. The learning history succeeds in balancing traditional research with pragmatic imperativesand powerful imagery.

Dry Lab is a rather unconventional mystery novel. The setting, a biomedical research institute, as well as elements of the plot, and many of the characters are broadly drawn from my career in science. The term /dry lab/ is one chemists use to describe a fraudulent experiment -- one in which no actual chemistry is done (hence the word "dry"). Rather, the data are fabricated to achieve the desired result. Instances of dry-labbing by the murder victim create a second layer of suspense as the hows and whys of his fraud are gradually uncovered. The characters include Dr. Jack Spivey, universally despised virologist and research con man; Rob Hastings, Spivey /s insecure and ethics-ridden postdoctoral fellow; Wendy Rich, travel agent by day, animal rights activist and computer hacker by night; Eve Dash, Spivey /s mistress and former call girl; and Vince Rubino, vending machine supplier and occasional self-induced psychopath. The action begins with Spivey /s murder. Hastings is ordered by the Institute Director to put his former boss /s scientific house in order, and discovers a rich legacy of laboratory larceny. As Spivey /s academic heir, Hastings inherits the dead man /s enemies, including the animal rights activists implicated in his murder. Computer sabotage, rodent venereal disease, toxic Twinkies and a purloined AIDS drug all figure in the plot, along with blackmail, murder, and romantic intrigue. --The Science in Dry Lab-- The science supporting key elements of Dry Lab's plot is both accurate and plausible, although, of course, not always practicable. The death of Jack Spivey, for example, results from administration of a monoamine oxidase inhibitor anti-depressant, a class of drugs known to cause hypertensive crisis in patients with a history of high blood pressure. This and the later attempted murder of Rob Hastings by induced anaphylactic shock both involve the use of a targeted toxin -- a substance harmless to anyone without specific susceptibility to its biological effects. Spivey/s pet project, sponsored by Thanoptec Inc., to drive native rat populations into extinction using a genetically engineered rat virus reminiscent of HIV has a similar basis in real science. The effectiveness of the anti-AIDS drug Spivey sold to his acquaintance, Terry Detweiler, is a bit more of a reach, but there is precedent for anti-cancer drugs acting against viruses like HIV. AZT is one such example. The science discussed in the brainstorming session between Hastings, the Mexican scientist who discovered the drug, and Detweiler, who is also a scientist, is again plausible and internally consistent. And, finally, Rob/s rescue during his anaphylactic episode through sexual arousal should also work. Under such circumstances, a twenty-something male would release a sizable burst of adrenaline, which would most certainly help counteract the effects of the allergen.

Based on the hit CW TV show, this second title in The Flash middle-grade series follows Barry Allen as he continues his mission to protect Central City from the sinister Hocus Pocus,but this time, a new evil lurks beneath the city streets . . . Written by New York Times/bestselling author Barry Lyga, this brand-new, original adventure builds upon the world of The Flash. This is one fans won't want to miss!

Functional Illiteracy is a dystopian tale of hypocrisy. Hatred and indignation are powerful forces that can lead a man to forsake all that he believes in. This is the story of Adam Truman, a reluctant hero who chooses indifference as his shield and apathy as his dagger. Whether he's facing the elitists of academia, communist leftovers, or advocacy groups, Adam continually finds himself having to defend the fact that he doesn't care. His tools of triumph aren't spectacular displays of bravery or courage. Rather, it is his ability to question hypocrisy. Adam doesn't necessarily hate everyone; he just doesn't find much use in anyone. His life is unraveling the mystery surrounding popular culture in which perversion is embraced and goodness is rejected. He has no compassion for the apologists and excuse seekers, nor does he pity their plight. He knows he is right but sees little utility in saying so. The elites don't want solutions. Slow suicide is the conclusion of his existence.

Mary Farley grew up in an Iowa orphanage. Never being adopted, she ages out from the orphanage and enrolls at Iowa State University as a ward of the state. While there, she becomes best friends with Annie Wilson, a free spirit of similar upbringing. They become nurses and travel with the Red Cross to Europe during WWII. Margie, as she is affectionately known, becomes involved with a patient who teaches her about life and death and the importance of family and survival. She eventually travels to Guatemala with a man she barely knows to keep a promise she made. Her life undergoes many changes, good and bad, while her career choices touch many people. Margie/s exploits become legendary as she is revered by friends, enemies and an entire nation. She is by no means a superwoman. She is merely a survivor. This story follows her exploits from age 10 until her death at age 79.

This book documents and reveals new information about the anthrax attacks of 2001. Decker provides first-hand perspective detailing the new science, microbial forensics, and parts of the investigation unknown to the public.

A day in the country is a relaxing and soothing way to spend your time-unless you're being stalked by a serial killer whose ultimate goal is to add you to his collection of human trophies. Samantha Masters is an environmental scientist who has inherited one of the largest textile firms in the region, a business built by her father. She is also the target of an obsessed lunatic who murders and mutilates his victims. The killer then leaves a mannequin in the wilderness dressed as himself, playing an infuriating game of cat and mouse with law enforcement. Unfortunately, all the sleuthing in the world doesn't prevent Samantha from being abducted. She manages to escape after being drugged, raped, and tortured-but not before suffering two gunshot wounds. Placed in a medically induced coma, she fights for her life. When she successfully recovers, however, she makes a series of chilling discoveries that force her to reexamine who she can trust. These tightly packed plot twists make Summer of Despair an unforgettable thriller, one that causes the reader to get up and make sure the front door is securely locked.
