Soldering iron tips Soldering irons come with a tip, so you don't have to go out and get a special one, but it's important to know the differences between them and make sure you're using the right tip for the kind of soldering you're doing. Some small-wattage irons come with conical pointed tips for detail work, while most high-wattage irons come with a flatter screwdriver-style tip that works ...

How to Solder : 8 Steps (with Pictures) - Instructables

Step 1 – Place a piece of the desoldering braid on top of the joint/solder you want removed. Step 2 – Heat your soldering iron and touch the tip to the top of the braid. This will heat the solder below which will then be absorbed into the desoldering braid.

How To Solder: A Complete Beginners Guide - Makerspaces.com

Place the soldering wire near the soldering iron and move it over the joint in a small circle until it reaches back to the soldering iron. Melt just enough solder to make the joint and then pull the iron away. The molten metal should cover all the elements of the joint. Remove the soldering wire and then the iron.

Tips and Tricks for Successful Soldering - How to Solder in ...

Creating a simple decorative solder could take your piece from "Nice" to "Wow." And once you get the hang of it, you'll start looking for places to jazz up your stained glass with your fancy soldering! Some folks dread soldering because it can be a bit of a challenge. Just remember not to get too hung up and stressed out about it.

Stained Glass Solder and Copper Foil Solder

Solder the joint: Apply the soldering iron and the solder to the joint simultaneously. Allow the solder to flow across it and for the flux to work. Allow enough solder onto the joint to make a good joint, but not excessive amounts - there should be no blobs of solder around! Making the solder joint should take no more than a couple of seconds.
